Section 1 : Coding

1. Problem Statement

Moniksha, a chess coach organizing a tournament, needs a program to manage participant IDs efficiently. The program maintains a doubly linked list of IDs and offers two functions: Append to add IDs as students register, and Print Maximum ID to identify the highest ID for administrative tasks.

This tool streamlines tournament organization, allowing Moniksha to focus on coaching her students effectively.

Input Format

The first line consists of an integer n, representing the number of participant IDs to be added.

The second line consists of n space-separated integers representing the participant IDs.

Output Format

The output displays a single integer, representing the maximum participant ID.

If the list is empty, the output prints "Empty list!".

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 3
163 137 155
Output: 163

Answer

```python
# You are using Python
class Node:
    def __init__(self,data):
        self.data=data
        self.prev=self.next=None
class ParticipantList:
    def __init__(self):
        self.head=self.tail=None
    def append(self,data):
        node=Node(data)
        if not self.head:
            self.head=self.tail=node
        else:
            self.tail.next=node
            node.prev=self.tail
            self.tail=node
    def get(self):
        if not self.head:
            return"Empty list!"
        max_id=self.head.data
        current=self.head.next
        while current:
            if current.data>max_id:
                max_id=current.data
            current=current.next
```

```python
        return max_id
n=int(input())
if n==0:
    print("Empty list!")
else:
    ids=list(map(int,input().split()))
    plist=ParticipantList()
    for pid in ids:
        plist.append(pid)
    print(plist.get())
```
